# Rivered Privacy Policy

Effective date: August 25, 2026 Last updated: August 27, 2026

Rivered ("the app," "we," "us") is a poker tournament clock and hosting toolkit for iPhone and iPad. This policy explains what the app does and does not do with your information. In short: everything you set up and run stays on your device. The only feature that sends anything off your device is Broadcast, an optional Pro feature you turn on yourself, described in section 5.

## 1. Who We Are

The app is developed by GadgetHeads LLC. You can reach us at support@gadgetheads.biz.

## 2. Information We Do Not Collect

- We do not require an in-app account. There is no sign-up, login, or password to use Rivered.
- We do not collect your name, email, or location.
- We do not use third-party advertising, analytics, tracking, or crash-reporting services, and we do not sell or share your information.
- We do not operate servers that store your tournaments. The one exception is Broadcast, an optional Pro feature: when you turn it on for a specific tournament, a snapshot of that tournament is published to a server we operate so others can follow along. See section 5.

## 3. Data You Create (Stored on Your Device)

The tournaments, blind structures, templates, player names, chip sets, tables, payouts, money records, and history you enter are stored locally on your device using Apple's on-device data storage. This information stays on your device and is not sent to us, unless you choose to use the Broadcast feature (section 5).

Rivered does not use iCloud to sync this data. Standard device backups you make through Apple (iCloud Backup or a computer backup) are handled by Apple under Apple's terms and privacy policy.

## 4. Importing Players from Contacts

Rivered lets you add players to your Player Database by picking one or more people from your Contacts. This uses Apple's built-in system contact picker. The app never reads your address book directly and never asks for permission to access all of your contacts. It only receives the name, and where available the email and phone number, of each contact you choose. That information is copied into local player profiles on your device and is not sent anywhere.

## 5. Broadcast (Optional Pro Feature)

Broadcast is an optional feature included with Rivered Pro. It is turned off by default and only does anything after you explicitly start it for a specific tournament. It is the only part of the app that sends

information off your device.

While Broadcast is running for a tournament, the app publishes a snapshot of that tournament to a server we operate (hosted by Supabase). The snapshot includes the tournament name, the current and next blind levels, time remaining in the level, players remaining, entry/player count, prize pool and currency, and display styling such as the accent color. When the tournament finishes, the app sends a final snapshot that includes the finishing standings: the player names you entered and the amount each player was paid.

This published snapshot is readable by anyone who has the shareable link, which opens a public web page (gadgetheads.biz/live). Do not use Broadcast if you do not want that tournament's details, including player names in the final standings, to be viewable by anyone with the link.

To run Broadcast, the app signs in anonymously to Supabase. This creates a random, per-install technical identifier so the server can tell which broadcast belongs to your device. It is not linked to your name, email, or any account, and there is no login. Turning Broadcast off, or discarding the tournament, removes the published snapshot. We do not use the Broadcast data for advertising, tracking, or profiling; it exists only to power the live viewer.

## 6. Purchases

Rivered is free to use, with an optional one-time in-app purchase, "Rivered Pro," that unlocks additional features. Purchases are sold and processed by Apple through the App Store. We never see or receive your payment card, billing address, or Apple Account credentials. Apple provides us only anonymized, aggregate sales information. Purchases are handled under Apple's terms and privacy policy.

## 7. No Analytics or Tracking

Rivered contains no advertising SDKs, no analytics SDKs, and no third-party crash-reporting or tracking technology. We do not build a profile of you and we do not track you across other apps or websites.

## 8. Diagnostics

If you have enabled Apple's "Share With App Developers" setting, Apple may share anonymized crash and performance data with us. This data is aggregated and does not identify you. You can turn this off in iOS Settings > Privacy & Security > Analytics & Improvements.

## 9. Children

The app is not directed at children under 13 and does not knowingly collect personal information from anyone.

## 10. Changes to This Policy

We may update this policy as the app changes. When we do, we will revise the "Last updated" date above and, where appropriate, the effective date.

## 11. Contact
